- 8. Examiner's Statement of Reasons for Allowance
- 9. Other _____.

An extension of time under 37 CFR 1.136(a) is required in order to make an examiner's amendment which places this application in condition for allowance. During a telephone conversation conducted on February 26, 2008, Mr. J. Eric Anderson requested an extension of time for one (1) MONTH(S) and authorized the Director to charge Deposit Account No. 50-0847 the required fee of \$120 for this extension and authorized the following examiner's amendment. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the claims:

Claim 29 has been rewritten as follows:

-- 29. (currently amended) A microprobe comprising:

a housing having an aperture;

an ion sensitive field effect transistor (ISFET) attached to the housing, wherein the ISFET has a gate located proximate the aperture;

a reference electrode attached to the housing proximate the aperture, wherein the housing is a hermetically sealed encapsulant that encapsulates the microprobe and exposes at least a portion of the gate and at least a portion of the reference electrode within the aperture, and wherein the ISFET is configured to operate as a pH sensor; and

a second ISFET, wherein the second ISFET is configured to operate as a blood gas sensor, and wherein the second ISFET has a gate located in communication with the aperture. --

Claim 29 was rewritten to further define what was meant by the housing being a hermetically sealed encapsulant. As rewritten, the claim recites that the housing

Art Unit: 3735

hermetically seals the probe except for a gate of the first ISFET, a reference electrode, and the gate of the second ISFET. Nakamura et al 4736748 shows in figure 3 a device with two ISFETs 10a and 10b exposed in an aperture of a housing. However, the housing does not hermetically seal the device, as recited in the claims.

Claim 31 has been rewritten as follows:

-- 31. A microprobe, comprising:

a substrate;

an ion sensitive field effect transistor (ISFET) monolithically integrated to the substrate, wherein the ISFET comprises a gate, and wherein the ISFET is configured to operate as a pH sensor;

a reference electrode monolithically integrated to the substrate;

a second ISFET, monolithically integrated to the substrate, wherein the second ISFET comprises a second gate, and wherein the second ISFET is configured to operate as a blood gas sensor;

associated circuitry comprising a temperature sensing diode, wherein the associated circuitry is monolithically integrated with the substrate; and

a housing having an aperture, wherein the housing hermetically encapsulates the substrate, the ISFET, the second ISFET, the reference electrode, and the associated circuitry, and wherein at least a portion of the gate, the second gate, and the reference electrode are located within the aperture. –

Claim 31 was amended to provide antecedent basis for the microelectrode and to clarify whether the aperture was in the housing or part of the substrate. Claim 31, as amended previously, recited that the aperture was in the housing, and that the substrate included the aperture. This was contradictory.
